

1. Astronauts undergo rigorous training to prepare for space missions.
2. Do you know how long astronauts typically stay on the International Space Station?
3. The first American woman in space was Sally Ride in 1983.
4. The Apollo program was designed to land astronauts on the moon.
5. Experiments conducted by astronauts in space help us learn about life on Earth.
6. NASA is currently working on plans to send humans to Mars.
7. Soviet cosmonaut Yuri Gagarin was the first person to orbit the Earth in 1961.
8. Astronauts wear special spacesuits to protect them in the vacuum of space.
9. How do astronauts deal with the physical effects of being in space for extended periods?
10. The space shuttle program launched 135 missions between 1981 and 2011.

The

space

shuttle

program

launched

135

missions

between

1981

and

2011.

How

do

astronauts

deal

with

the

physical

effects

of

being

in

space

for

extended

periods

?

Astronauts	wear	special	spacesuits
to	protect	them	in
the	vacuum	of	space
.			

Soviet

cosmonaut

Yuri

Gagarin

was

the

first

person

to

orbit

the

Earth

in

1961

.

NASA

is

currently

working

on

plans

to

send

humans

To

Mars

.

Experiments	conducted	by	astronauts
in	space	help	us
learn	about	life	on
Earth	.		

The

Apollo

program

was

designed

to

land

astronauts

on

the

moon

.

The

first

American

woman

in

space

was

Sally

Ride

in

1983

.

Do

you

know

how

long

astronauts

typically

stay

on

the

International

Space

Station

?

Astronauts	undergo	rigorous	training
to	prepare	for	missions
in	space	.
